

**STATEMENT OF BASIS  
PERMIT MODIFICATION/CANCELLATION  
NPDES PERMIT NUMBER WA0023663  
WEYERHAEUSER PE ELL MAINTENANCE FACILITY**

The Weyerhaeuser Truck Maintenance Facility at Pe Ell, Washington, discharges stormwater and truck wash water to the Chehalis River through a large, serpentine lagoon. Stream cleaning of trucks, with its attendant risk of toxic discharge, has been modified to a zero discharge system. The present truck wash is a cold water rinse of the vehicles that is used on a daily basis when needed. Given the detention time in the lagoon, treatment of the runoff is quite effective. There is almost no chance of significant contamination of the Chehalis River from this source if operations at the site remain as they are at present.

Given the pristine character of the Chehalis River at this point, testing frequency has been reduced to an annual sample in the winter (February 1).

**Response to Comment**

Comment:

What if February 1 is on a weekend?

Response:

Collection date modified.
